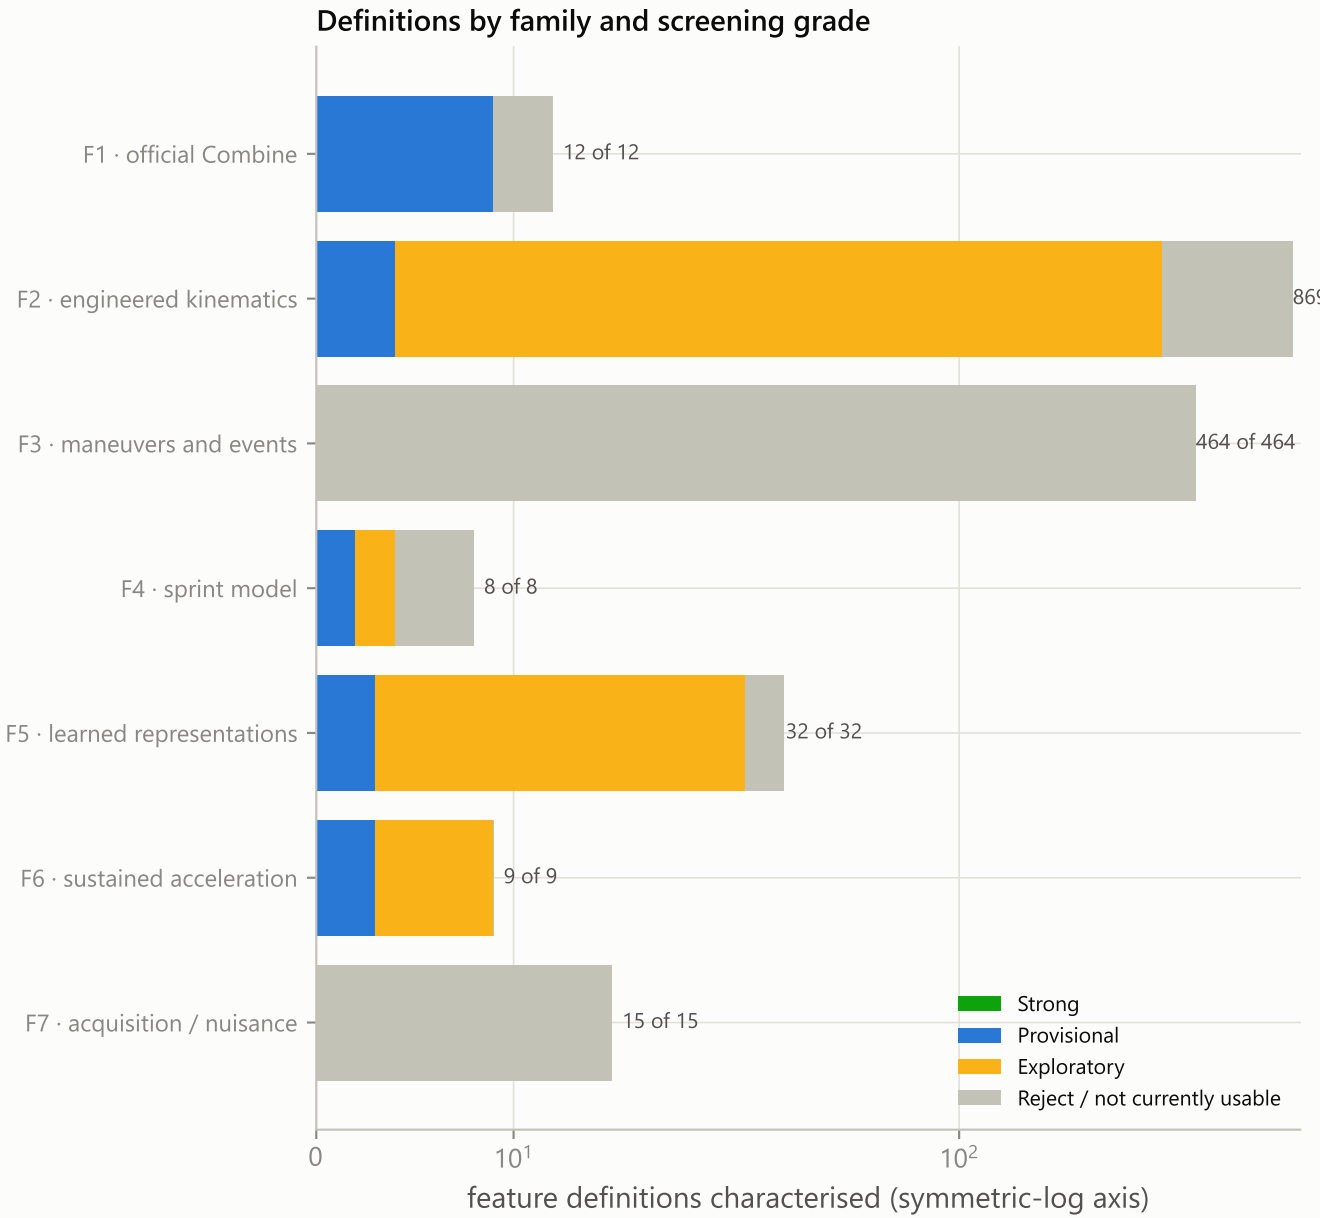
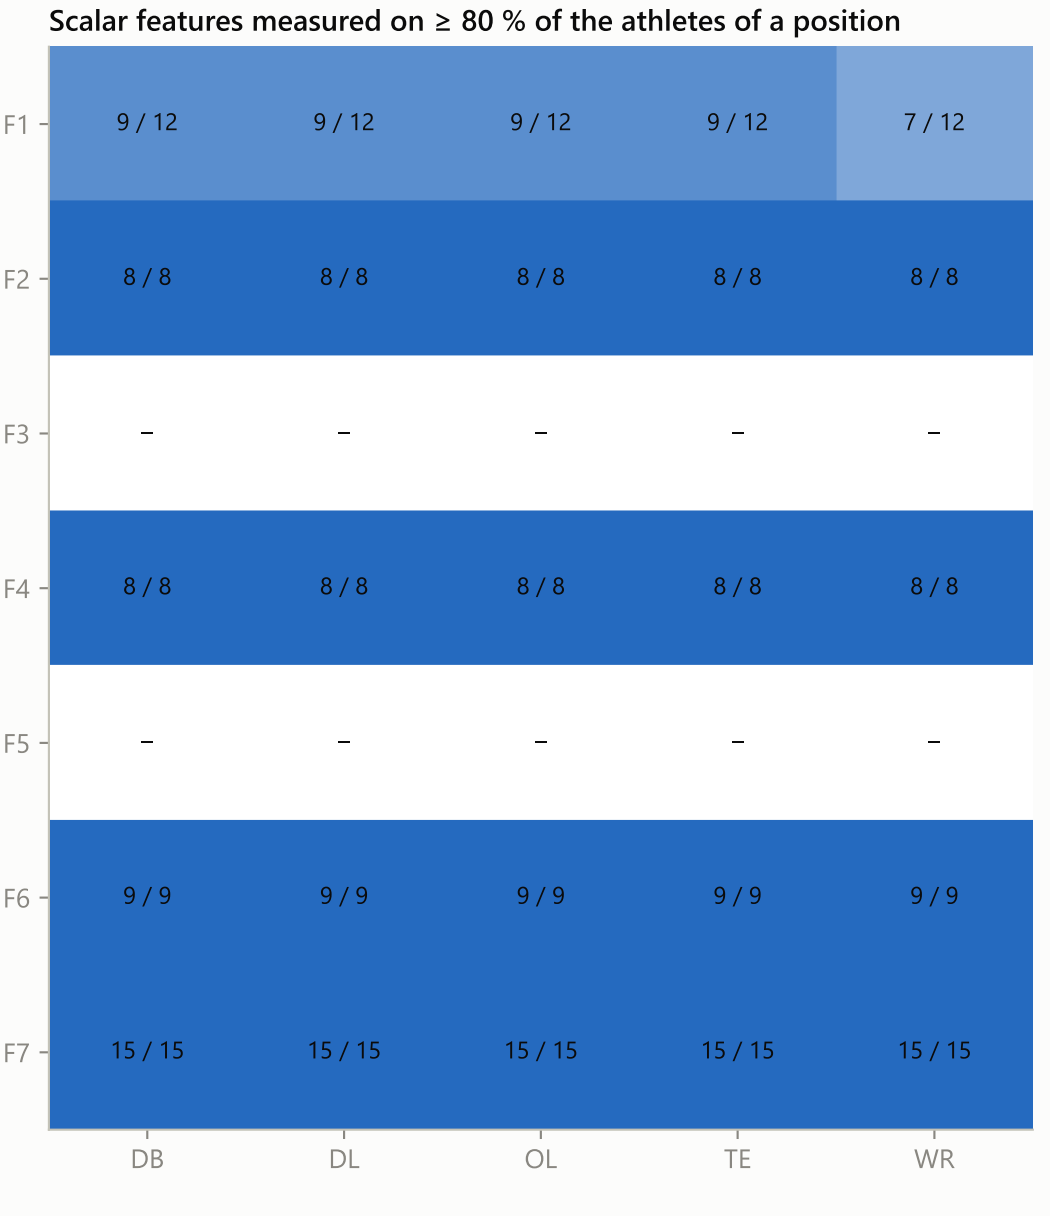
Feature inventory by family and position





Left, unit: feature definition (one row of the dictionary). Other-drill and event definitions (F2 / F3 beyond the forty) carry Phase 04 evidence only. Right, unit: scalar feature of the forty or official measurement; cell = features whose share of tracked athletes with a value reaches the reference, of those of the family (denominator: up to 60 tracked athletes; learned representations have no per-position row). Grades are heuristic screening labels.
