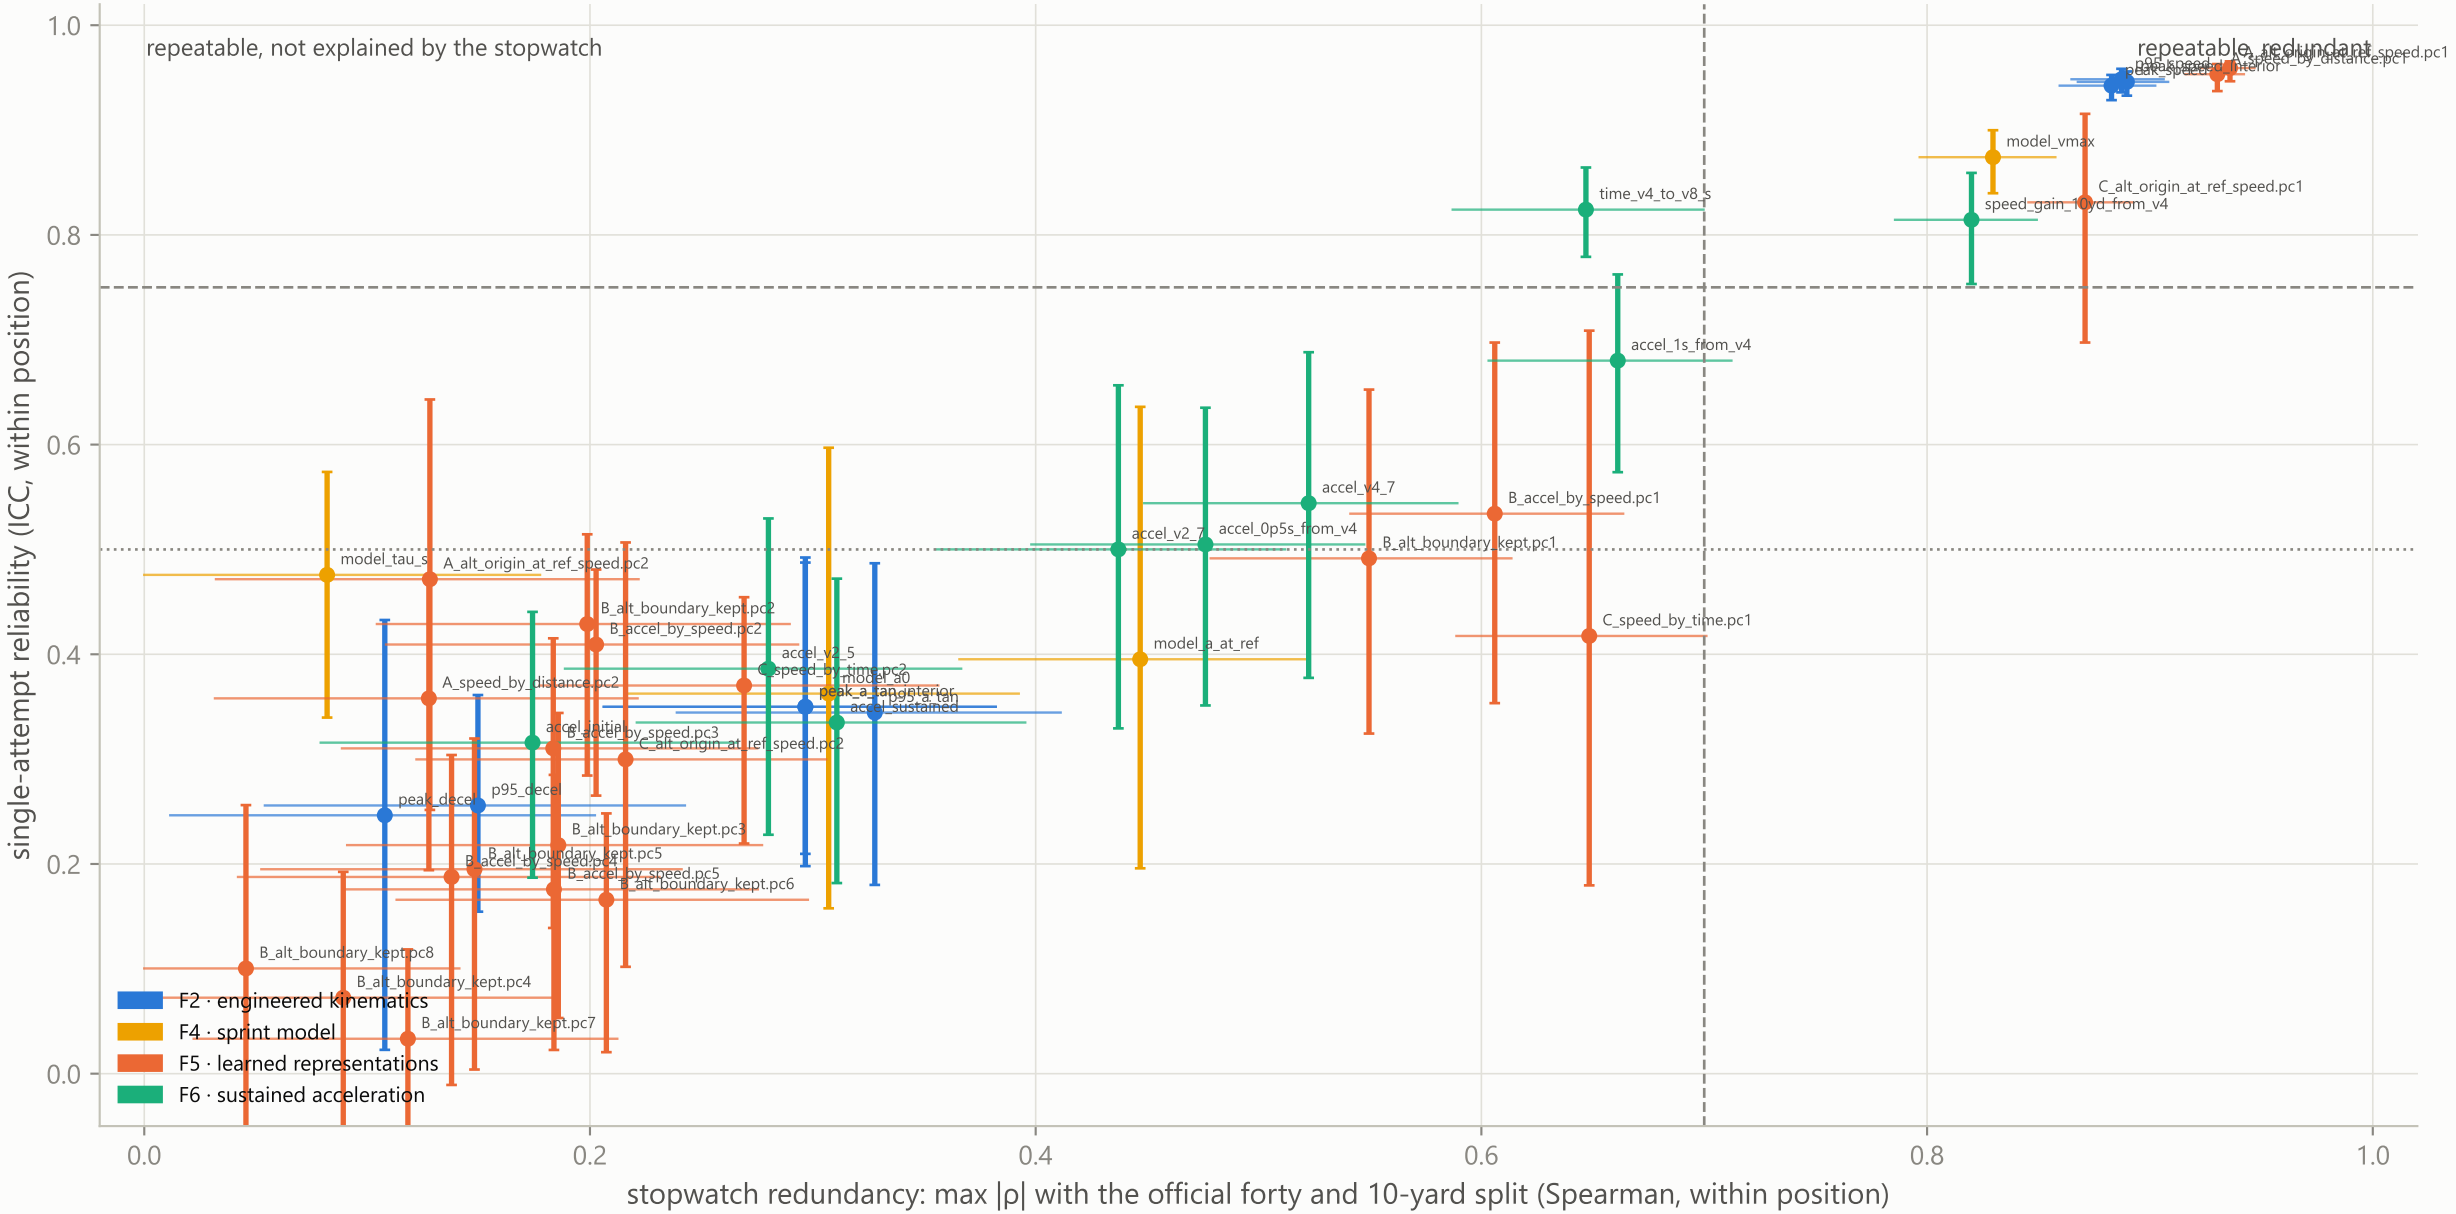
Reliability against stopwatch redundancy



Unit: athlete (up to 375 with a repeated attempt for the vertical axis; athlete means for the horizontal axis). One dot per candidate scalar feature of the forty, functional PCA components included; whiskers = 95 % intervals (athlete bootstrap for the ICC, Fisher z for ρ). Dashed lines: ICC 0.75 and |ρ| 0.7; dotted: ICC 0.5 (heuristic references). A low |ρ| alone is not evidence of new information: see the reliable share not explained by the official times in atlas_characteristics.
