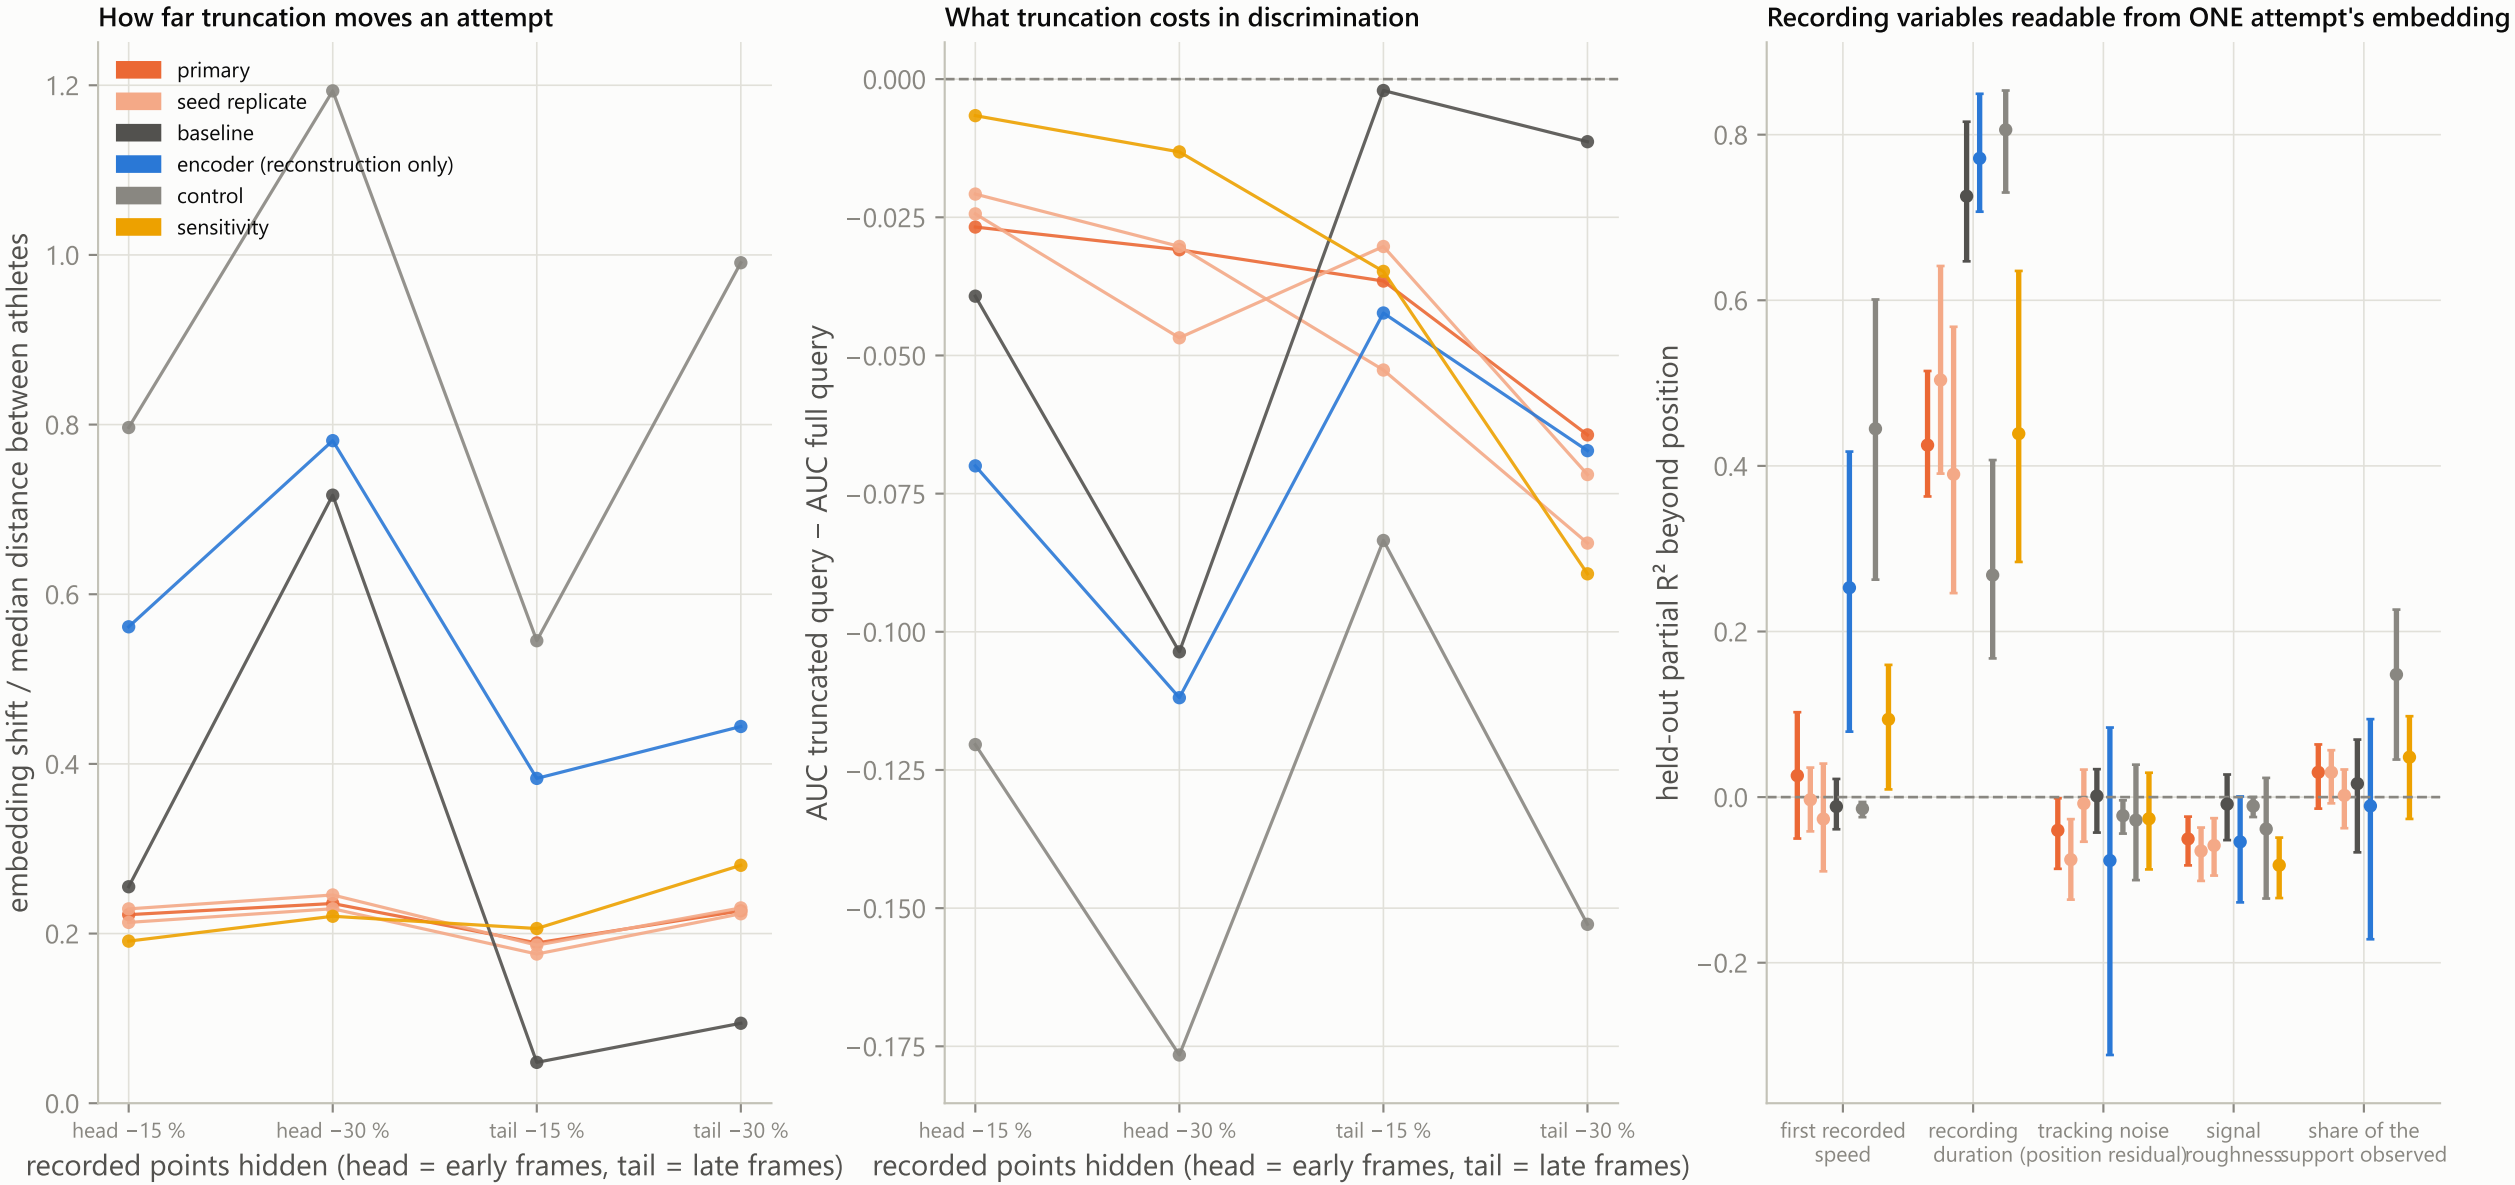
Acquisition-window and tracking-quality sensitivity



Unit: held-out athlete (n up to 418). Left and middle: the same attempt embedded with its first or last recorded points hidden — recorded points are only hidden, never invented, and a truncated view covering less than half of the support is not embedded. Middle: query = truncated first attempt, gallery = full second attempts of the position. Right: cross-fitted ridge probes from one attempt's embedding to a property of its recording; 0 = the embedding does not carry it. Whisker = 95 % athlete bootstrap.
