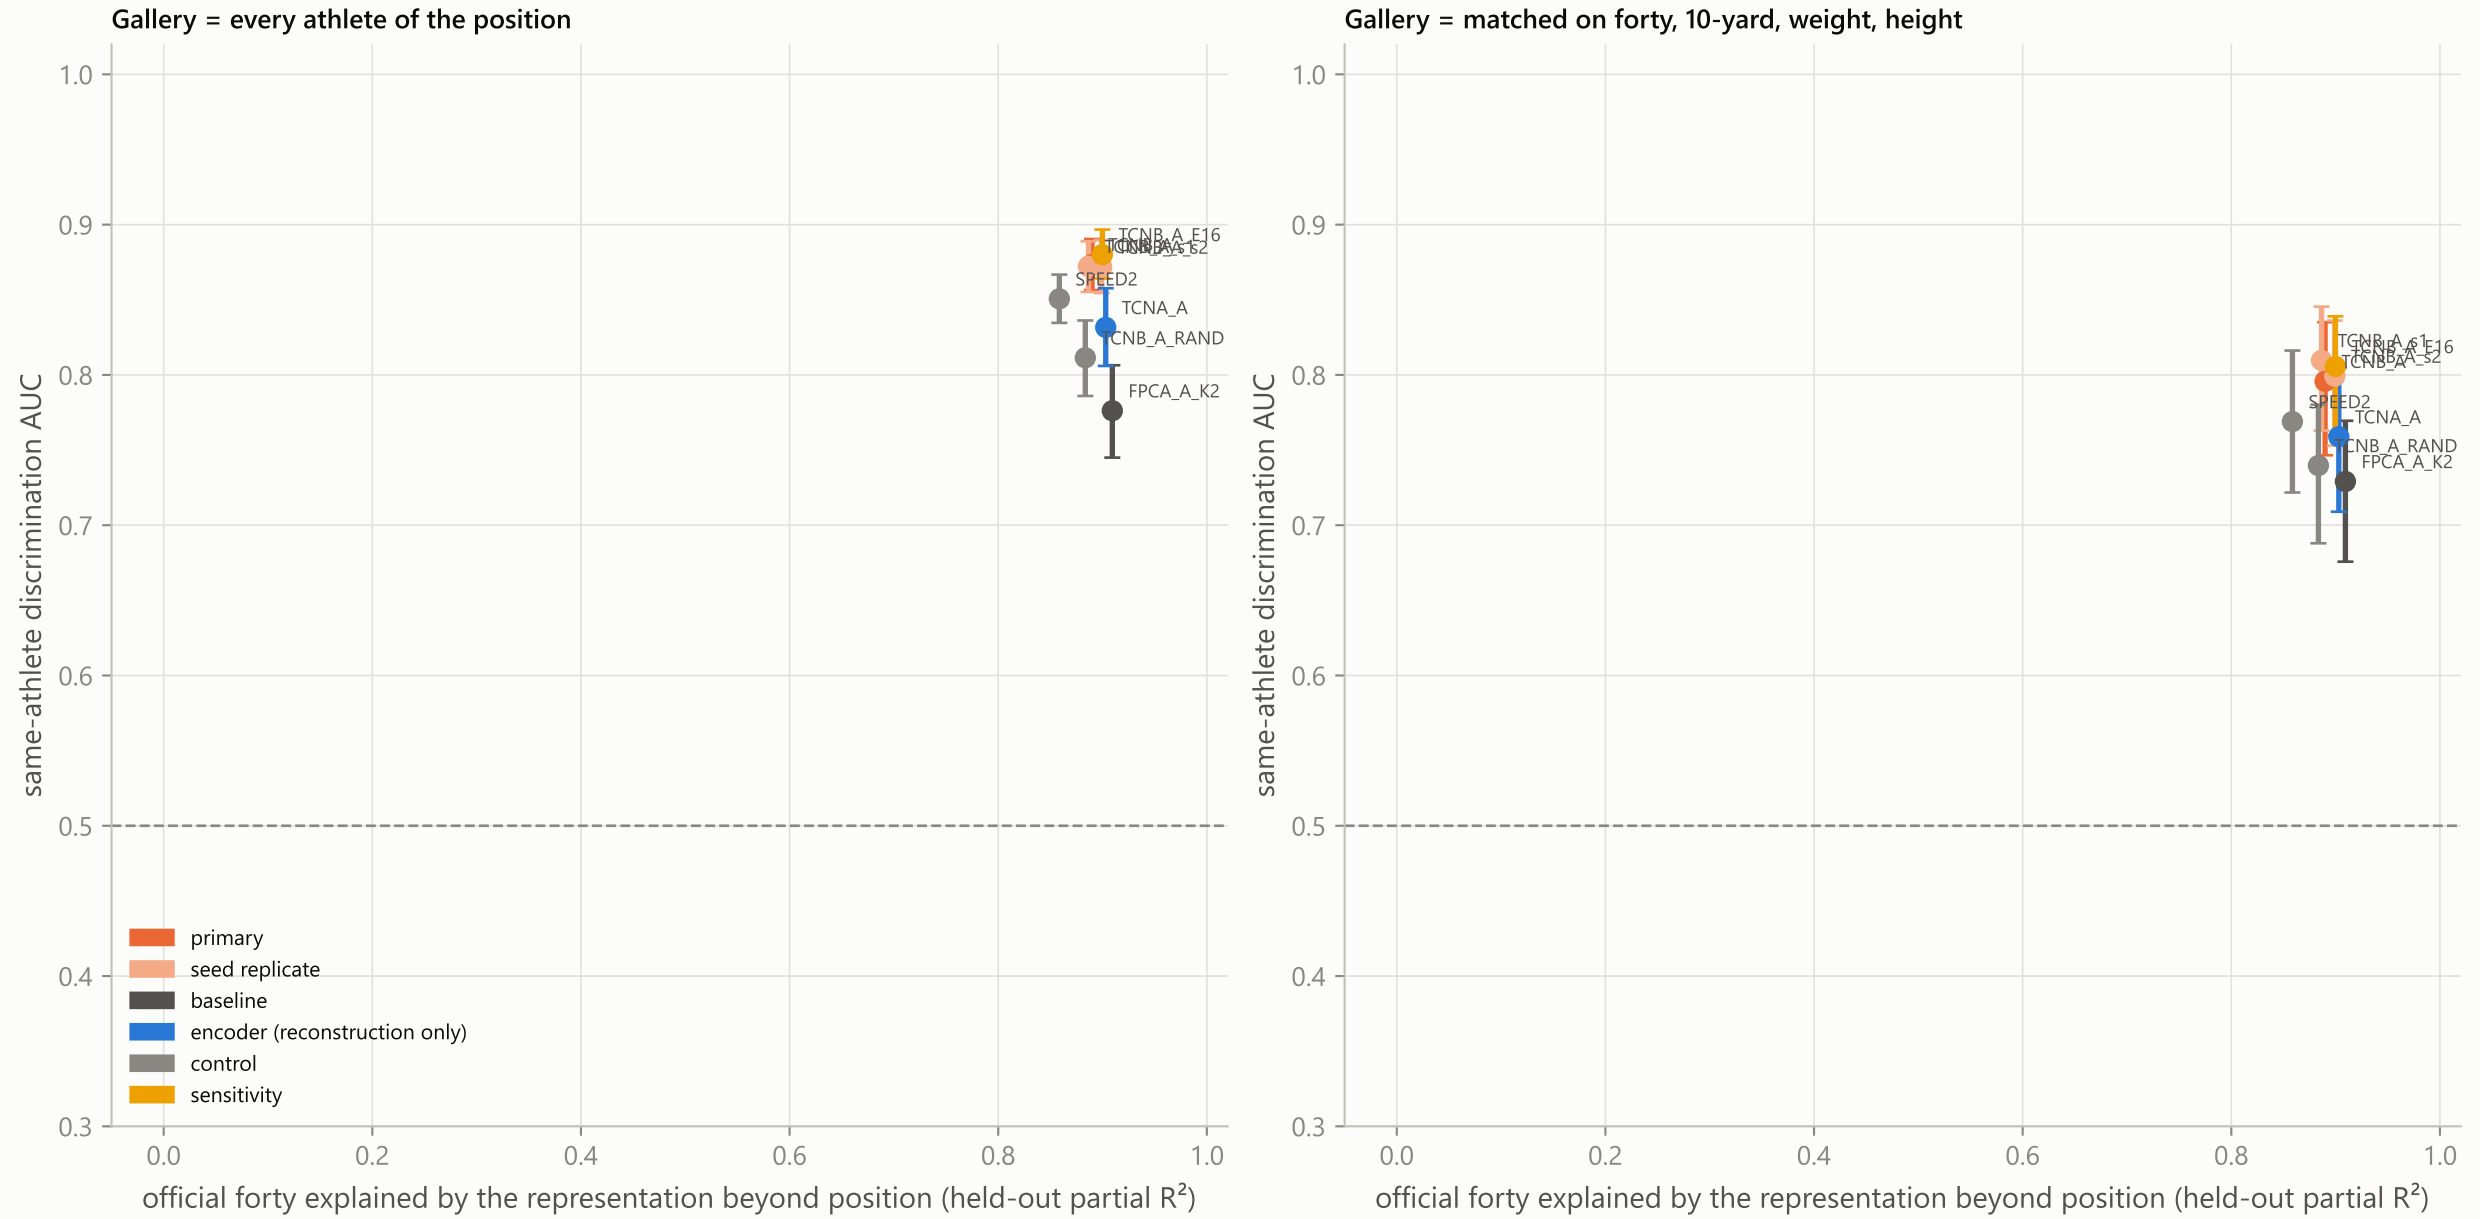
Repeatability against stopwatch redundancy, with uncertainty



Unit: confirm-role held-out athlete (n up to 265). x is the same on both panels: how much of the official forty the representation predicts. Left: repeatability against every athlete of the position (95 % athlete bootstrap). Right: against look-alike impostors (95 %, athletes resampled as queries and impostors). A representation can sit far right (it contains the stopwatch) and still be high on the right panel: redundancy and extra repeatable structure are not exclusive. Neither panel measures NFL value.
