Representation quality: repeatability, matched discrimination and nuisance dependence

Unit: confirm-role held-out athlete for the AUC panels (n up to 265); all held-out athletes elsewhere. Dot = estimate, bar = 95 % athlete interval where one is computed (matched AUC: queries and impostors resampled). * = flagged collapsed (effective rank share below the heuristic line). The third panel is the cross-fitted residual of notebook 03 — read it with the audit of section 5, not alone. Frozen shortlist: C1_traditional_baseline, C2_speed_control, C3_acceleration, C5_fpca, C6_tcn_b_8d, C7_tcn_compact. No panel measures NFL value.
