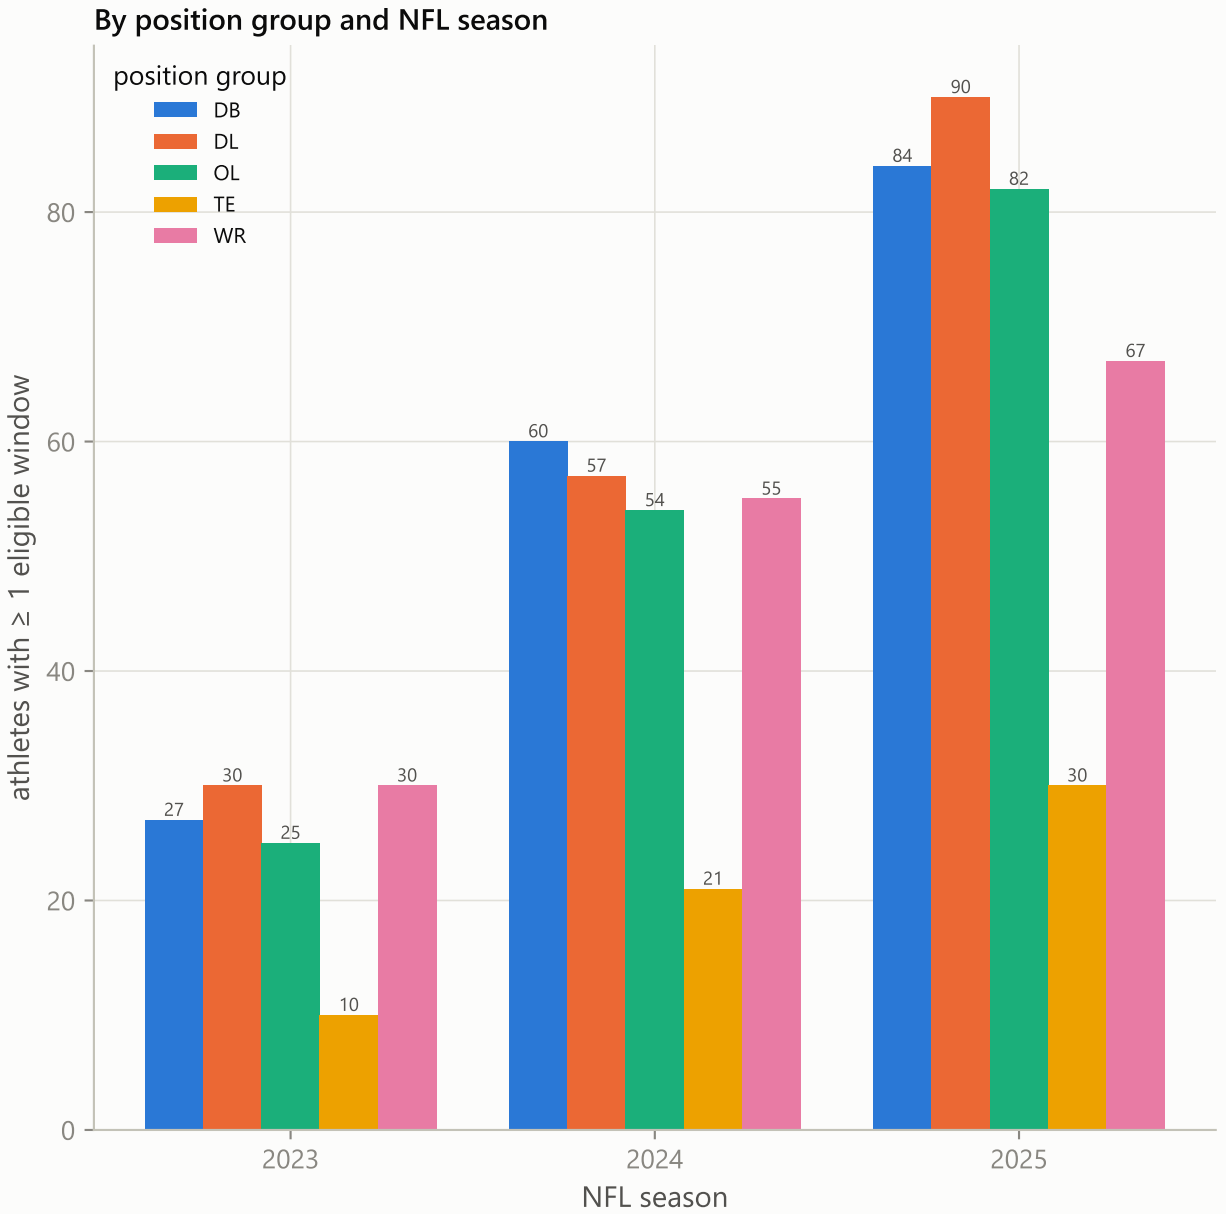
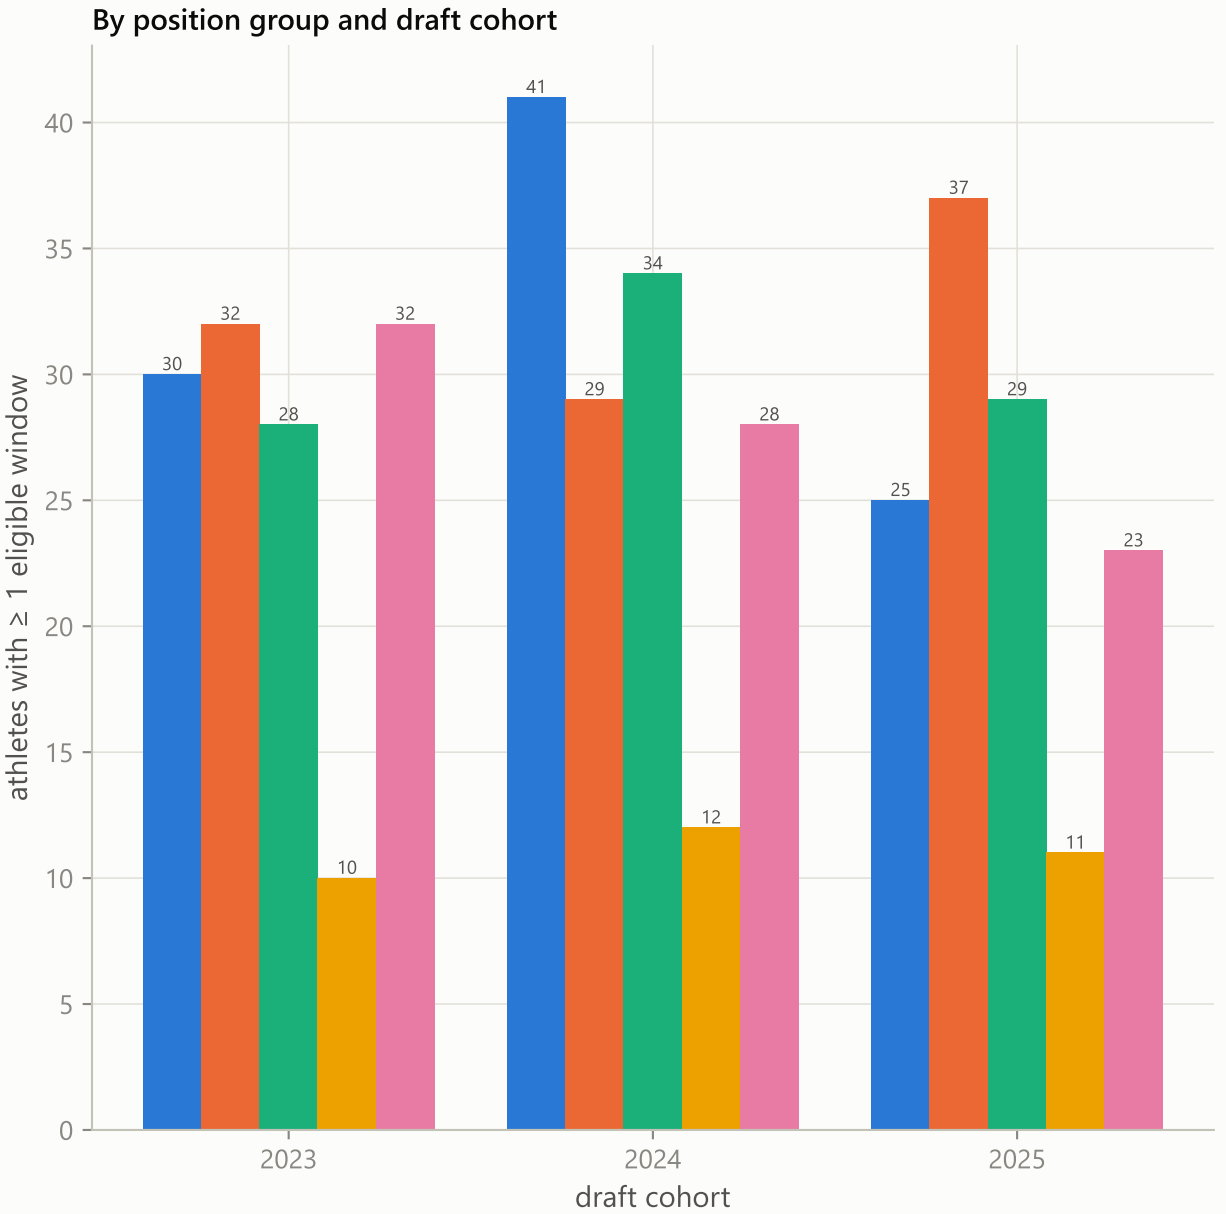
NFL tracking cohort by position, season and draft cohort





Unit: athlete. Denominator: 401 athletes with at least one eligible post-snap window (season types REG; quality tier in ['A', 'B']; ≥ 15 valid post-snap frames). An athlete tracked in several seasons is counted once per season on the left and once in the cohort panel. NFL tracking covers the Combine cohorts only, so a later cohort has fewer seasons of exposure by construction.
