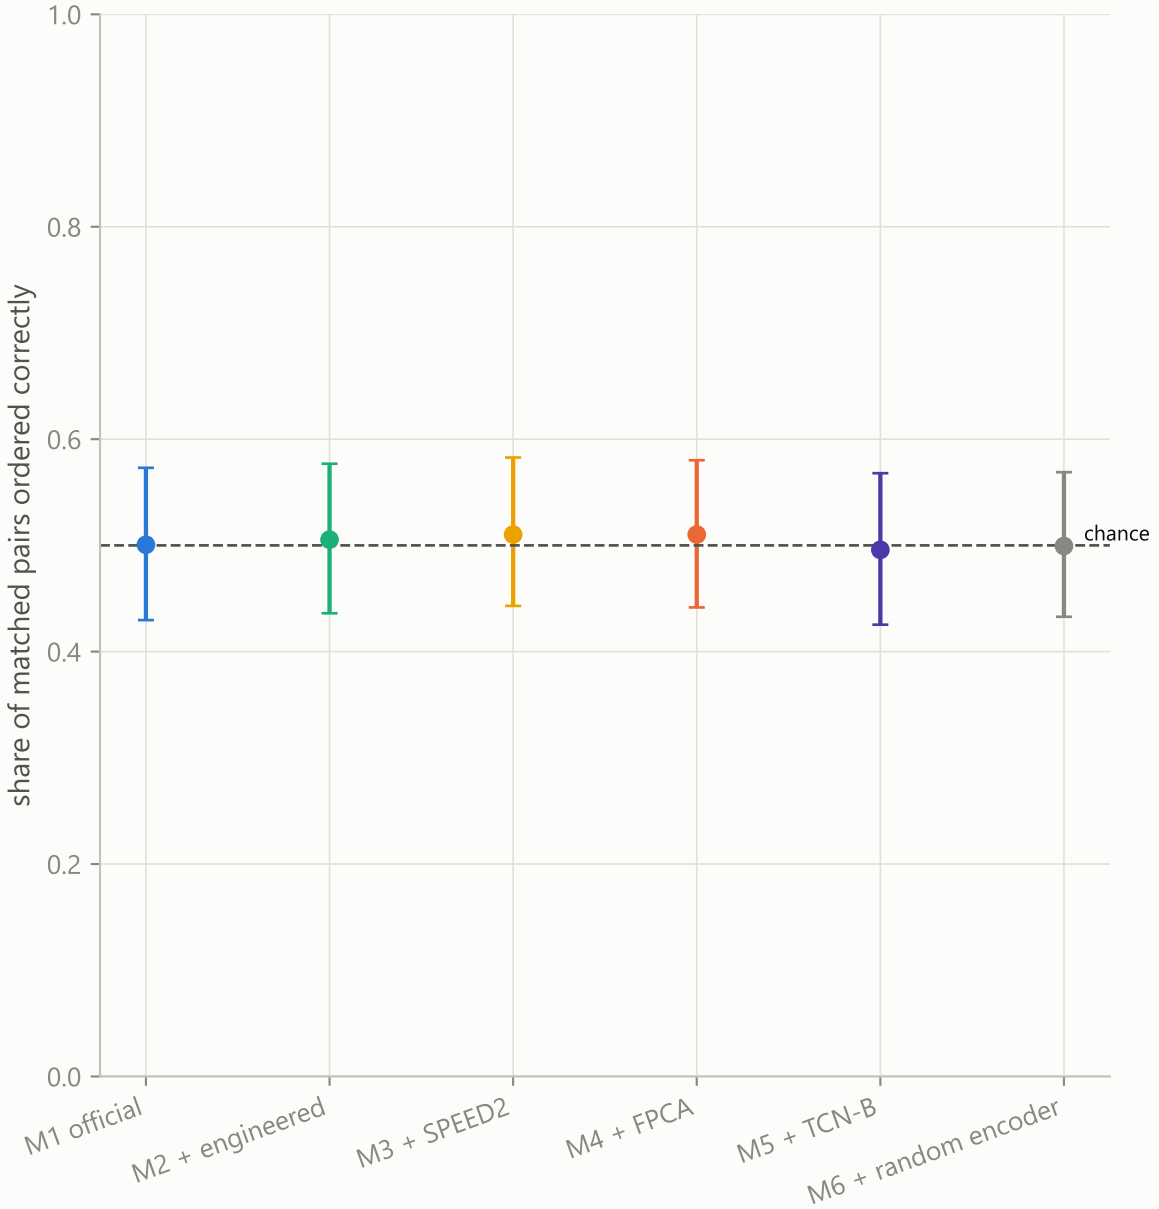
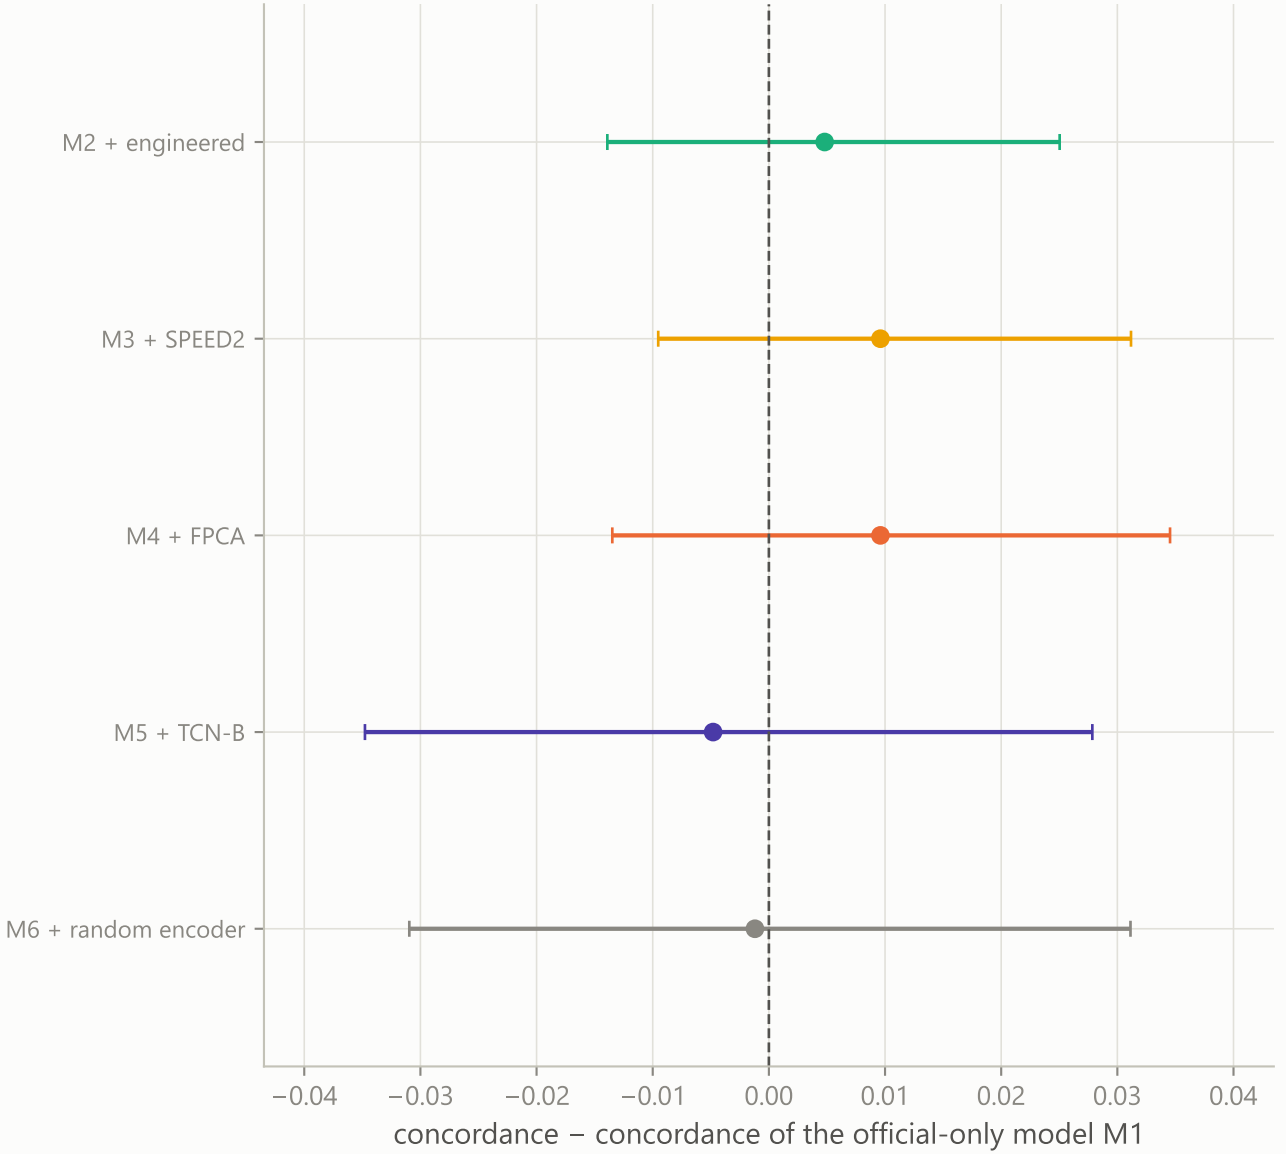
Similar stopwatch, different NFL movement: can a model tell matched prospects apart? — O2.accel_sust05_mean





833 pairs of 275 athletes: same position, official forty, 10-yard split and body size inside the frozen caliper; an athlete belongs to up to 14 pairs, so intervals resample ATHLETES. A pair is ordered correctly when the out-of-fold predicted difference has the sign of the observed NFL difference. Pairs are formed without any NFL value.
