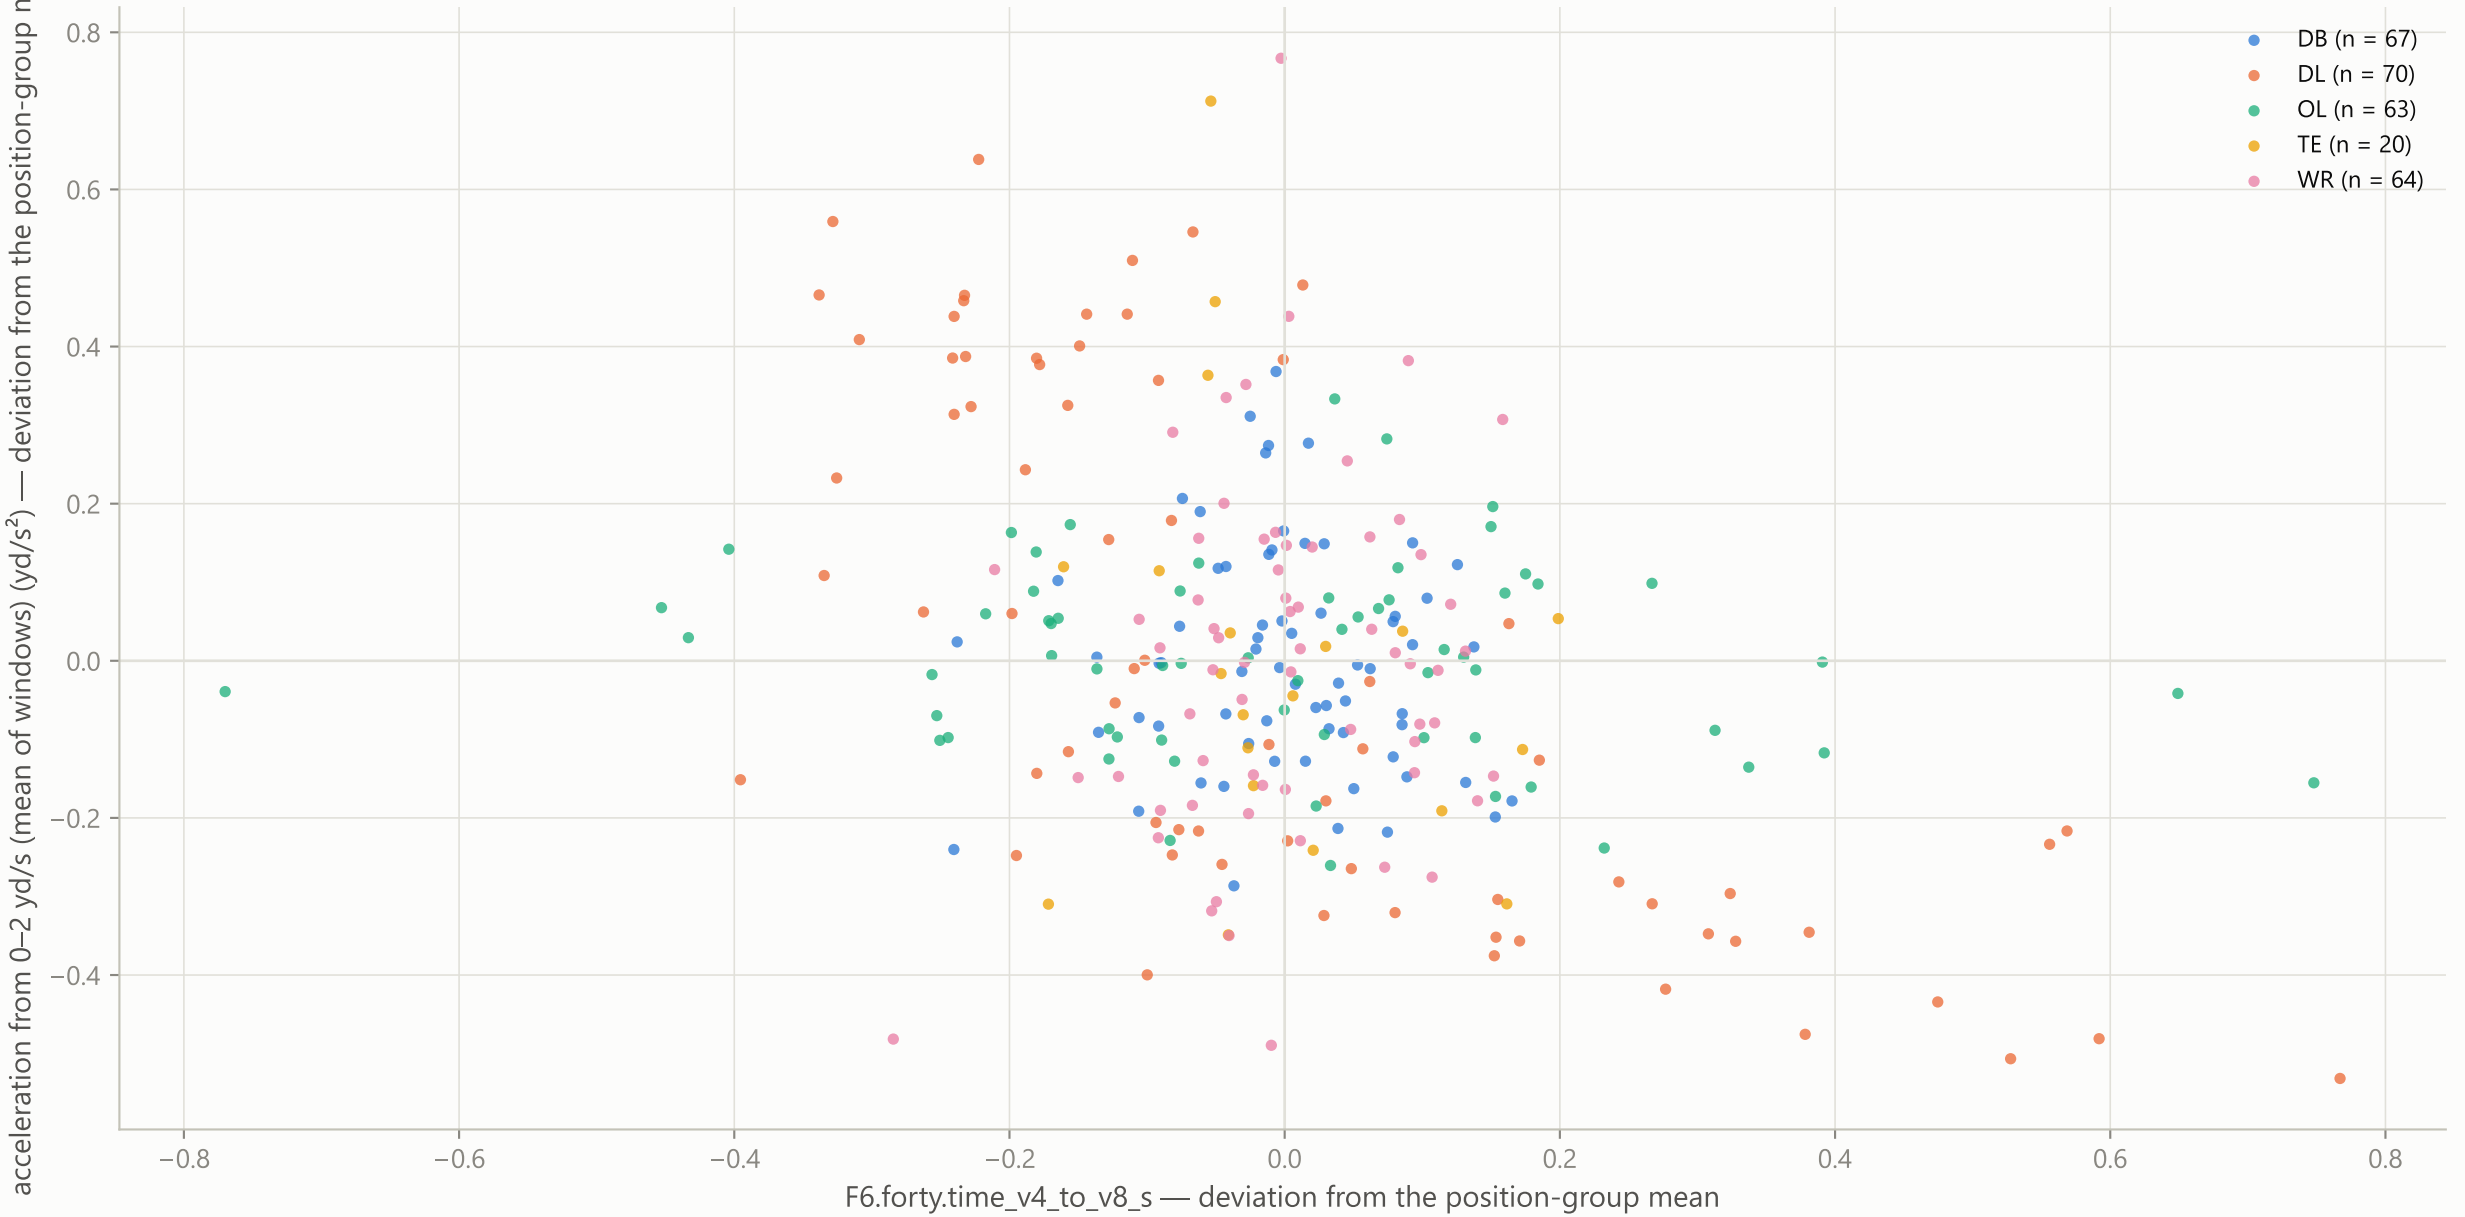
Combine speed development against NFL acceleration



284 athletes; both axes centred inside the position group, so the picture shows differences between athletes of the same position. Within-position Spearman -0.32; after position, draft cohort, cmb_forty, cmb_ten_yd_split, cmb_combine_weight: partial r +0.05 [-0.05, 0.15]. NFL starting-speed range of the target: [0, 2) yd/s In-sample and descriptive: the held-out answer is model M2 against M1.
