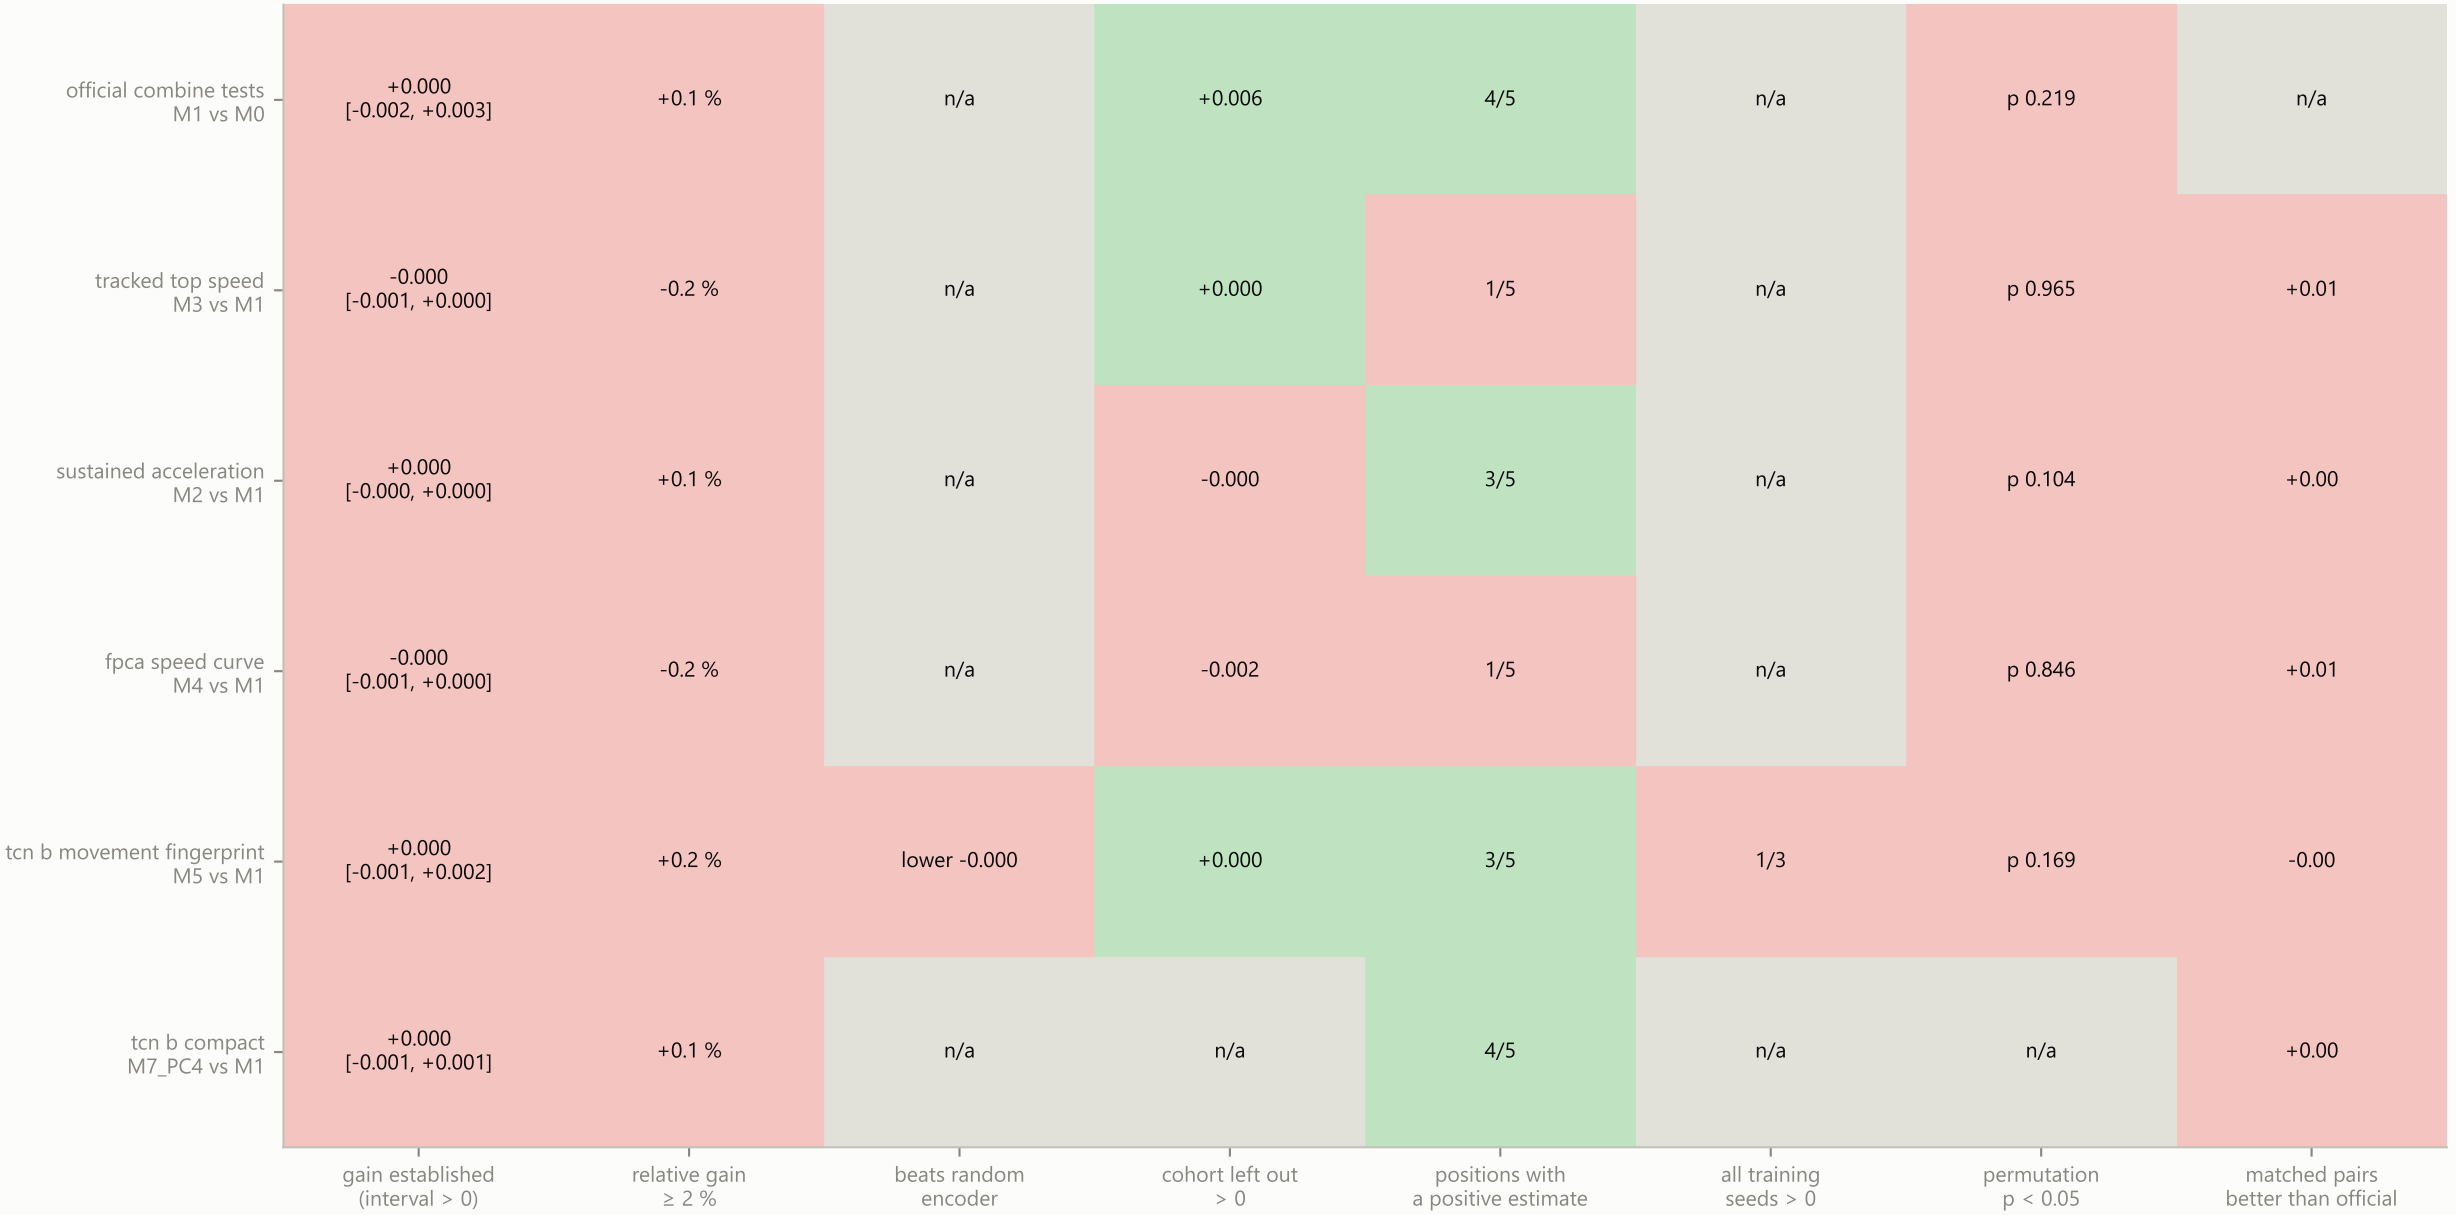
Strength of the transfer evidence, dimension by dimension



Primary frozen target O2.accel_sust05_mean, 284 athletes. Green: the check holds; red: it does not; grey: not applicable or not evaluated. First column: Δ RMSE against the dimension's reference with its 95 % interval. Repeatability at the Combine is not a column: it is not NFL validation. A dimension is 'predictive validated' only when its whole row is green.
