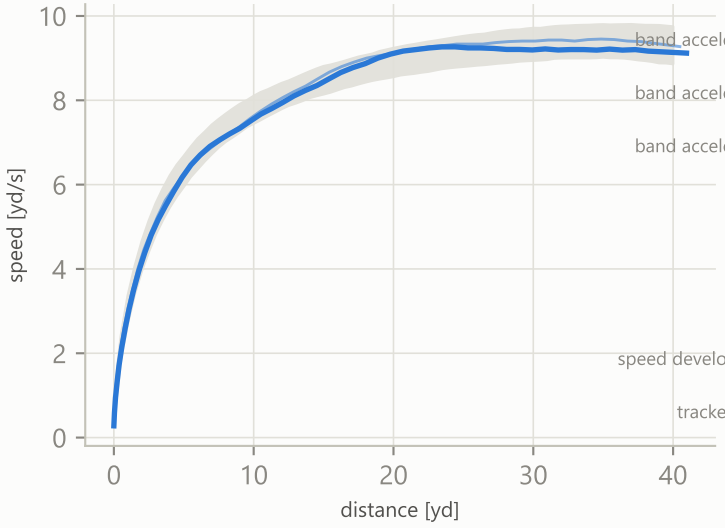
Anthony Bradford

COMBINE INTELLIGENCE LAB

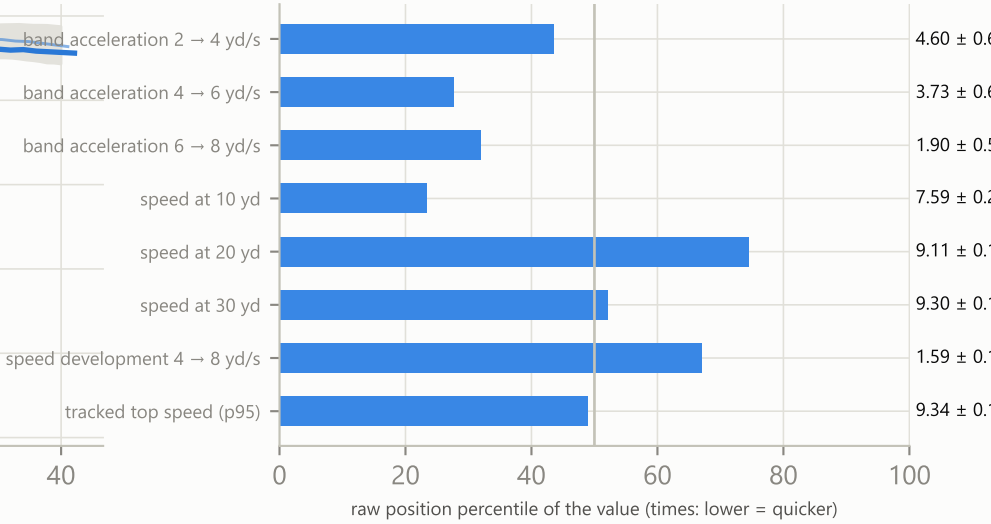
OL · draft class 2023 · forty 5.08 s · 10-yard 1.74 s · 332 lb · 76.0 in

recording evidence: high

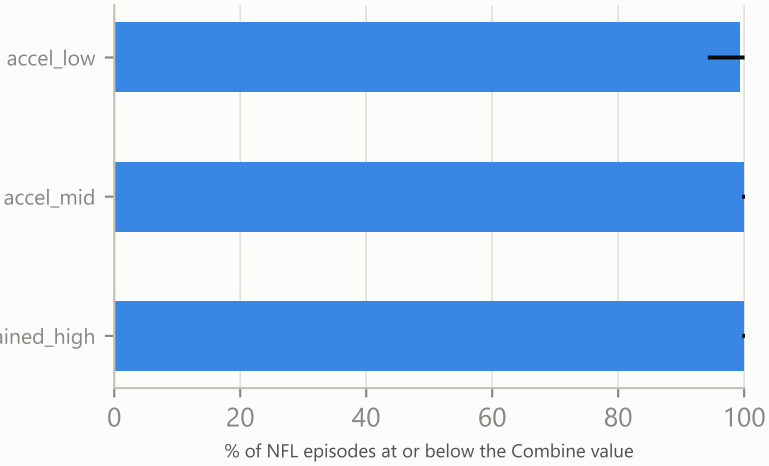
Speed by distance vs OL peers (10–90 %)



Tracked measures (value ± 95 % repeat-attempt interval)



NFL movement-demand correspondence (descriptive)



Stopwatch twins

- Mason McCormick — forty 0.00 s apart, 5 distinguishable feature(s)
- Sidy Sow — forty 0.01 s apart, 2 distinguishable feature(s)
- Joe Alt — forty 0.03 s apart, 5 distinguishable feature(s)
- Earl Bostick — forty 0.03 s apart, 3 distinguishable feature(s)
- Drew Kendall — forty 0.03 s apart, 4 distinguishable feature(s)
- Jacob Monk — forty 0.01 s apart, 2 distinguishable feature(s)

SUGGESTED FILM-REVIEW CHECKLIST

- Early acceleration (first steps, below about 4 yd/s) — the first steps of a pull or a set.
- Mid-sprint speed development (about 4 to 8 yd/s) — pulls and climbs to the second level.
- Late acceleration and high speed (above about 6 yd/s) — screens and long pursuit after a turnover.

SUGGESTED FOLLOW-UP TESTING

- Early acceleration (first steps, below about 4 yd/s) — timed starts over 0–5 and 0–10 yd with split timing, at least two repetitions, recorded from before the first movement.
- Mid-sprint speed development (about 4 to 8 yd/s) — rolling-start (flying) 10-yard segments entered at a controlled speed, so the 4 → 8 yd/s band is measured directly.
- Late acceleration and high speed (above about 6 yd/s) — a longer sprint or flying 20-yard segment, because 40 yards can end before top speed is reached.
- These are ways to measure a phase again; their value for football evaluation has not been established.

Descriptive scouting information from Combine tracking. No value on this page predicts NFL performance: in this project, tracked Combine features did not improve held-out prediction of NFL movement or receiver separation beyond official testing. Use it to decide what to examine next — not to rank prospects.
