General-manager summary — Ladd McConkey

WR · Which relevant physical qualities does the forty not measure?

Descriptive scouting information from Combine tracking. No value on this page predicts NFL performance: in this project, tracked Combine features did not improve held-out prediction of NFL movement or receiver separation beyond official testing. Use it to decide what to examine next — not to rank prospects.

Decision

- The forty does not describe these demands: a targeted test is the way to observe them; the Combine data alone cannot.

What was measured

- No difference larger than its measurement uncertainty.

Strength of evidence

- Ladd McConkey — band acceleration 2 → 4 yd/s: range 4.78–9.12 yd/s² over 2 attempts.
- Ladd McConkey — band acceleration 4 → 6 yd/s: range 4.40–6.83 yd/s² over 2 attempts.
- Ladd McConkey — band acceleration 6 → 8 yd/s: range 4.59–5.01 yd/s² over 2 attempts.
- Ladd McConkey — speed at 10 yd: range 9.04–9.51 yd/s over 2 attempts.

Evidence categories

- Uncertain difference: 4
- Measurement mismatch: 2
- Additional data needed: 9

Cannot conclude

- Which prospect will perform better in the NFL: no tracked Combine feature improved held-out prediction of NFL movement (Milestone 06) or receiver separation (Milestone 08B) beyond official testing.
- A draft order or a value judgement: the Lab describes measurements and does not rank prospects.
- That a physical similarity to an NFL demand means the demand will be met in pads, in traffic or late in a game.
- That a measured Combine difference causes a football outcome, or that training it would change one.
